Hello, I'm Victor Pimentel and I graduated from CUNY York College with a degree in Computer Science. Currently, I am looking for full-time employment. I am interested in working for [company] as a Software Engineer, so I wanted to tell you a little about myself.

In order to become a better developer, I have taken part in a variety of programs since I graduated. I was accepted into an internship at The Difference for the summer, where I created an admin console using React and NodeJS. The Admin Console allows admin users to manage all CRUD operations for the clients' database, including activating and deactivating subscriptions. The admin console enabled the team to handle client needs from the application and increased team productivity. Parallel to that, I was accepted into two apprenticeships where I created projects week by week using React, Node, Firebase, AWS, MySQL, and PostgreSQL. I worked with my team this summer to create an ecommerce site for auto parts using Firebase and React. To handle authentication, payments, products, and customer interactions, we used the Firebase extension for Stripe.
